CONTROL STATEMENTS

1)Write a program which asks the user for his login and password. Both must be strings. After 3 wrong attempts, the user will be rejected.

```
using System;

class Program

{

    static void Main()

    {

        string username = "admin";

        string password = "1234";

        for (int i = 1; i <= 3; i++)

        {

            Console.Write("Enter Username: ");

            string user = Console.ReadLine();

            Console.Write("Enter Password: ");

            string pass = Console.ReadLine();

            if (user == username && pass == password)

            {

                Console.WriteLine("Login Successful!");

                return;

            }

            else

            {

                Console.WriteLine("Invalid Username or Password");

            }

        }

        Console.WriteLine("Rejected! You have exceeded 3 attempts.");

    }
```

}

OUTPUT

Enter Username: user

Enter Password: 1111

Invalid Username or Password

Enter Username: admin

Enter Password: 0000

Invalid Username or Password

Enter Username: test

Enter Password: 1234

Invalid Username or Password

Rejected! You have exceeded 3 attempts.

2)Write a program that accepts 2 numbers and prints whether the 2nd number is in unit's, ten's, hundreds or thousands place in the 1st number.

```
using System;
class Program
{
    static void Main()
    {
        Console.Write("Enter the first number: ");
        int num1 = Convert.ToInt32(Console.ReadLine());
        Console.Write("Enter the second number (single digit): ");
        int digit = Convert.ToInt32(Console.ReadLine());

        if (num1 % 10 == digit)
            Console.WriteLine("The digit is in Unit's place.");
        else if ((num1 / 10) % 10 == digit)
```

```
            Console.WriteLine("The digit is in Ten's place.");
        else if ((num1 / 100) % 10 == digit)
            Console.WriteLine("The digit is in Hundred's place.");
        else if ((num1 / 1000) % 10 == digit)
            Console.WriteLine("The digit is in Thousand's place.");
        else
            Console.WriteLine("The digit is not found in the first four places.");
    }
}
```

OUTPUT

Enter the first number: 5678

Enter the second number (single digit): 6

The digit is in Hundred's place.
