

MOVIE MINI PROJECT

CODES AND COMMANDS

1. CREATE MAIN FOLDER

```
mkdir MovieReflection
```

```
cd MovieReflection
```

2. CREATE CLASS LIBRARY PROJECT

```
dotnet new classlib -n MovieMiniProject
```

```
cd MovieMiniProject
```

3. DELETE DEFAULT CLASS

```
del Class1.cs
```

4. Movie.cs

```
using System;
```

```
namespace MovieMiniProject
```

```
{
```

```
    public class Movie
```

```
    {
```

```
        public int MovieId { get; set; }
```

```
        public string MovieName { get; set; }
```

```
        public string Genre { get; set; }
```

```
        public Movie()
```

```
        {
```

```
        }
```

```
        public Movie(int id, string name)
```

```
        {
```

```
            MovieId = id;
```

```
            MovieName = name;
```

```
        }
```

```
        public void DisplayMovie()
```

```
        {
```

```
            Console.WriteLine(MovieName);
```

```
        }
```

```
        public void ShowMovie(int id)
```

```
        {
```

```
            Console.WriteLine(id);
```

```
        }
```

```
}  
}
```

5. Actor.cs

```
using System;  
  
namespace MovieMiniProject  
{  
    public class Actor  
    {  
        public int ActorId { get; set; }  
  
        public string ActorName { get; set; }  
  
        public Actor()  
        {  
        }  
        public Actor(int id, string name)  
        {  
            ActorId = id;  
            ActorName = name;  
        }  
  
        public void DisplayActor()  
        {  
            Console.WriteLine(ActorName);  
        }  
  
        public void ShowActor(int id)  
        {  
            Console.WriteLine(id);  
        }  
    }  
}
```

6. BUILD MOVIE MINI PROJECT

```
dotnet build
```

7. GO BACK TO MAIN FOLDER

```
cd ..
```

8. CREATE CONSOLE APPLICATION

```
dotnet new console -n AssemblyReflectionApp  
cd AssemblyReflectionApp
```

9. Program.cs

```
using System;  
using System.Reflection;  
  
class Program
```

```

{
    static void Main()
    {
        Assembly assembly =
            Assembly.LoadFrom("MovieMiniProject.dll");
        Console.WriteLine(
            "Assembly Name: " +
            assembly.GetName().Name);
        foreach (Module module in assembly.GetModules())
        {
            Console.WriteLine(
                " Module Name: " +
                module.Name);
            foreach (Type type in module.GetTypes())
            {
                if (type.IsClass)
